Patent No. 6084069

GENERAL INFORMATION:
APPLICANT: UNITED STATES OF AMERICA; DEPT.
APPLICANT: OF HEALTH AND HUMAN SERVICES
TITLE OF INVENTION: MOTILITY STIMULATING
TITLE OF INVENTION: PROTEIN USEFUL IN CANCER DIAGNOSIS
TITLE OF INVENTION: THERAPY
NUMBER OF SEQUENCES: 69
                                                                  -ISLDTNMPFGPE
                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                      861
                                                                                                                                                                                                                                                                                                                                                         91
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FINNEGAN

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Mutations in the Caenorhabditis elegans let-23 EGFR-like gene define
T elements important for cell-type specificity and function.";
EMBO J. 13:360-366(1994).
C.ELEGANS VULVA. POSSIBLE RECEPTOR REQUIRED FOR THE INDUCTIVE SIGNAL
C.ELEGANS VULVA. DEVELOPMENT. ACTIVATED BY LIN-3 AND ACTS BY
WAY OF LET-60 RAS. THE LIN-3/LET-23 PAIR IS A SIMPLIFIED VERSION
OF THE MAMMALIAN NEUREGULIN-ERBB NETWORK.
C.I.CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE = ADP +
PROTEIN TYROSINE PHOSPHATE.
C.I.SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
C.I.SIMILARITY: BELONGS TO THE EGF RECEPTOR FAMILY.

"Purification, characterization and complete amino acid sequence nuclease C1 from Cunninghamella echinulata var. echinulata.";

Eur. J. Biochem. 256:112-118(1998).

-!- FUNCTION: THIS ENZYME HAS BOTH RNASE AND DNASE ACTIVITY.

-!- COFACTOR: REQUIRES MAGNESIUM OR MANGANESE FOR ACTIVITY.

-!- SUBCELLULAR LOCATION: SECRETED.

-!- SUBCELLULAR LOCATION: SECRETED.

Kanzaki T., Olofsson A., Moren A., Wernstedt C., Hellman U.,

Miyazono K., Claesson-Welsh L., Heldin C.-H.;

TGF-beta 1 binding protein: a component of the large latent complex of TGF-beta 1 with multiple repeat sequences.";

Cell 61:1051-1061(1990).

-1- SUBUNIT: THE LARGE LATENT COMPLEX OF TGF-BETAL FROM PLATELETS IS COMPOSED OF THE TGF-BETA1 MOLECULE NONCOVALENTLY ASSOCIATED WITH A DISULFIDE-BONDED COMPLEX OF A DIMER OF THE N-TERMINAL PROPEPTIDE OF THE TGF-BETA1-BP DOES NOT BIND DIRECTLY TO ACTIVE TGF-BETA1.

C-1- ALTERNATIVE PRODUCTS: HUMAN PLATELETS TGF-BETA1-BP IS CONSIDERABLY SMALLER THAN THE FIBROBLAST FORM (125 KDA VS. 170-190 KDA),

C-1- ALTERNATIVE PRODUCTS: AND A STERNATIVE SPLICING OF THE SAME GENE OR THAT TGF-BETA1-BP UNDERGOES CELL-SPECIFIC PROTEOLYSIS.

C-1- PTM: CONTAINS HYDROXYLATED ASPARAGINE RESIDUES.

C-1- SIMILARITY: CONTAINS 16 EGF-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. "Endonuclease G from mammalian nuclei is identical to the major endonuclease of mitochondria.";
Nucleic Acids Res. 23:88-97(1995).

-!- FUNCTION: CLEAVES DNA AT DOUBLE-STRANDED (DG)N.(DC)N AND AT SINGLE-STRANDED (DC)N TRACTS. IN ADDITION TO DEOXYRIBONUCLEASE ACTIVITIES, ALSO HAS RIBONUCLEASE (RNASE) AND RNASE H ACTIVITIES CAPABLE OF GENERATING THE RNA PRIMERS REQUIRED BY DNA POLYMERASE GAMMA TO INITIATE REPLICATION OF MITOCHONDRIAL DNA.
                                                                                                                                           87
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA replication generated by endonuclease
